AW120

New ceramic grade for high speed cast iron turning

AW120

New ceramic grade for high speed cast iron turning

FEATURES

- Excellent oxidation resistance and chemical stability
- Finish/semi-finish/roughing of cast iron under high cutting speed conditions
- Particularly adapted to cylinder lining machining where high cutting speed, dry machining is prevalent
- PVD coating layer improves notch wear in continuous machining
(Coating is available as request)

TaeguTec is pleased to announce a brand new ceramic insert turning line.

The AW120 ceramic grade has excellent oxidation resistance, high chemical stability as well as temperature resistance that prolong tool life under high cutting speed conditions.

The AW120 insert is also capable of finishing, semi-finishing and roughing applications on cast iron under high cutting speed conditions, further adding to its economy and productivity.

With these insert characteristics it enables optimal machining of cylinder liners where high cutting speed under dry conditions are the norm.

Product News

Case Study 1

- Workpiece material : Jacket / Cast Iron

Designation	Grade		Cutting condition			
			V (m/min)	f (mm/rev)	Ap (mm)	Type
SNGN 120412	AW20	70 pcs	450	0.3	3	Ext. Turning, Dry
	AW120	75 pcs				

Case Study 2

- Workpiece material : Jacket / Cast Iron

Designation	Grade		Cutting condition			
			V (m/min)	f (mm/rev)	Ap (mm)	Type
SNGA 150616	AW20	150 pcs	500	0.3	3	Ext. Turning, Dry
	AW120	190 pcs

- Standard edge preparation : 0.2mm X 20°
- Special edge preparation is supplied by request

Application Area

- Workpiece Material : Cast Iron
